

Service kit per la manutenzione ordinaria dei sensori TPMS OE

Service kit for the ordinary maintenance of OE TPMS sensors

Ad ogni sostituzione degli pneumatici, i TPMS Service Kit devono essere utilizzati per sostituire quelle componenti che sono soggette ad usura quali la valvola in gomma completa con la vite o nel caso di valvola in metallo il dado, la guarnizione, il meccanismo interno ed il coperchietto.

Quando si cambiano gli pneumatici su una vettura senza TPMS è normale sostituire le valvole; pertanto, anche in presenza di sensori TPMS, bisogna effettuare la corretta manutenzione.

Questa azione, previene rotture e evita danni più importanti e molto costosi che potrebbero comportare anche la sostituzione dell'intero sensore.

Infatti, se perfettamente mantenuti, i sensori non devono essere sostituiti ad ogni cambio pneumatici. La loro vita media è estremamente alta e le batterie durano anche fino a 10 anni, in funzione anche dell'utilizzo del veicolo. Quindi, ad ogni cambio devono essere tassativamente sostituite le parti soggette ad usura.

At every replacement of tyres, TPMS Service Kits must be used to replace the components subject to wear like the complete rubber valve with screw or in case of metal valve the nut, the seal, the core and the cap. When tyres are changed on a car without TPMS, it is normal replacing valves; therefore, also in the presence of TPMS sensors, a correct maintenance has to be executed.

This action prevents breakages and avoid more important and more expensive damages which could require also the replacement of the whole sensor.

In fact, if perfectly maintained, sensors do not have to be replaced at every change of tyres. Their average life is extremely high and batteries last up to 10 years, also according to the use of the vehicle.

Therefore, at every change, the parts subject to wear must be imperatively replaced.

Valigette Italmatic di Service Kit per sensori OE

Italmatic case of Service Kit for OE sensors

Italmatic, per semplificare il lavoro della manutenzione dei sensori TPMS, ha sviluppato due valigette contenenti un assortimento di Service-Kits che consentono di sostituire le componenti di tutti i sensori originali. Sono perfettamente compatibili con i Service Kits originali e garantiscono elevati standard qualitativi.

Tutte le componenti metalliche sono sottoposte a trattamenti anticorrosione. Guarnizioni di altissima qualità garantiscono massima affidabilità anche in condizioni estreme.

In conclusione è la soluzione ideale per ottimizzare il magazzino e per essere sempre pronti a gestire qualunque vettura ci si trovi di fronte.

Inoltre, la loro identificazione è facilitata da differente colore delle bustine contenenti i vari service kit.

sensors easier, developed two cases containing an assortment of Service-Kits allowing to replace the components of all OE sensor. They are perfectly compatible with original Service Kits and assure high quality standards.

All metal components are submitted to anticorrosion treatments. Top quality seals assure max. reliability also in extreme conditions.

In conclusion, it is the ideal solution to optimize stock and to be always ready to maintain any car reaching Yr. workshop.

Moreover, their identification is very easy thank to the different colour of the poly bags containing the kits.
